

JAMES EUBANKS

DATA SCIENCE AND ENGINEERING MANAGER

✉ james.eubanks21@gmail.com
🐙 github.com/JEub
☎ (404) 797-1882
in [in/james-eubanks-data-sci](https://www.linkedin.com/in/james-eubanks-data-sci)

Core Competencies

Data Science & Analytics	Statistics	Python
Team Leadership	Product Management	Statistics
Data Engineering	Apache Airflow	FastAPI
Architectural Design	PostgreSQL	Microservices
Strategic Planning	JIRA	AWS

Relevant Experience

WOW! Internet, Cable, and Phone

Feb 2022 - Present

Manager of Data Science and Engineering

- Successfully managed a team of 5 data scientists, engineers, and analysts to deliver data-driven solutions across the engineering and product departments.
- Developed and executed a comprehensive "health of the home" project roadmap to identify, monitor, and proactively resolve in-home network issues resulting in a 17% reduction of field operational expenses.
- Completely replaced outdated enterprise network monitoring software utilizing Telegraf, Influx, and Grafana saving the business approximately \$100,000 annually in licensing fees.
- Conducted thorough product evaluations and executed multiple proofs-of-concept (POCs) on graph databases to effectively model network topology.
- Created a backend API using the FastAPI framework to streamline data validation and perform CRUD operations on both a graph and Postgres database.
- Designed and implemented a centralized data architecture and clear data pipeline diagrams to seamlessly integrate with more than 10 distinct systems.
- Orchestrated the deployment of applications, pipelines, and databases by leveraging GitLab Runners for efficient DevOps processes and employed Kubernetes for container orchestration.
- Mentored senior backend developers and data engineers while implementing department-wide coding standards for API development and documentation.

Cox Communications

Nov 2020 - Feb 2022

Data Scientist

- Developed a comprehensive project charter for an anomaly detection and process control ecosystem, establishing clear objectives and guidelines for implementation.
 - Increased visibility into outages and "normal" behavior across all of Cox's Communications markets.
 - Proactively reduced operating expenses by over \$10,000 per month for field service technicians visits to homes.
- Established database schemas and infrastructure to efficiently hold aggregated transaction data.
- Built and maintained dashboards in Tableau summarizing customer care transactions which provided the Care organization in-depth visibility into their internal process flow.
- Utilized pySpark, EMR, AWS Step Functions, and Oozie workflow to develop efficient ETL packages, swiftly taking the "Apollo" project from prototype to production within a tight six-week timeframe.
- Conducted in-depth analytics on various internal software systems, including Splunk logs and a PEGA-based workflow system, identifying opportunities that resulted in an approximate \$1 million annual reduction in OpEx spend.
- Identified automation opportunities, facilitated knowledge discovery, enabled data-driven decision-making, optimized processes, and recommended new capabilities to drive operational efficiency and effectiveness.
- Provided mentorship to junior team members and collaborated closely with interns, fostering their professional development and promoting documentation strategies for knowledge transfer and organizational continuity.

NCR

Aug 2020 - Nov 2020

Data Scientist / API Developer (Contract)

- Designed and implemented the backend application architecture for the “Intelligent Kitchen” project within Google Cloud Platform.
 - Built survival analysis models to predict time to order completion for "Ghost kitchens" and online ordering.
 - Increased prediction level from +/- 20 minutes to +/- 3 minutes, which provided significantly better estimates to delivery drivers.
 - Created pytest testing suite and documentation for backend API built with Flask-RESTx.
 - Identified data sources for intelligent routing, capacity planning, and order time predictions.
 - Served as Tech Lead reporting to the VP of Engineering.
-

Workforce Logiq

Mar 2016 - Aug 2020

Enterprise Data Architect/Scientist

- Managed a team of 4 working on data aggregation and presentation, machine learning, and AI projects.
- Developed the company's Machine Learning/Artificial Intelligence roadmap.
- Created product plans and prototyped SOW Cost Estimation and SOW Document Generation models (nlTK)
- Served on the Data Governance committee and overseeing aspects of the Data Quality initiative.
 - Identified gaps in multiple accounting tables caused by rounding errors allowing for a reconciliation of \$1.2 million of previously "lost" revenue.
 - Ensured GDPR and CCPA compliance on all PII.
- Designed and developed Azure based Flask application for extracting data from multiple sources while providing the user “drag and drop” functionality with a React front end.
 - Created the database schemas in PostgreSQL using the SQLAlchemy ORM and alembic for easy migrations.
 - Integrated a Flask blueprints backend with a React.js front end using Docker containers and compose.
- Created and prioritized product development work using the Agile methodology.
- Worked with stakeholders to architect data warehouse solutions to meet analytics requirements.
- Trained the Business Intelligence and Data Engineering teams on Sisense and Elasticubes.
- Mentored members of the Data Engineering and backend development teams in Python, PostgreSQL, and API requests.
- As a member of the Data Governance Committee comprised of individuals from across all aspects of the organization, created data ingestion rules ensuring high data quality.
- Wrote policy and procedure, training, and technical documentation for Data Services.

Business/Data Analyst

- Developed a new scoring model and program to evaluate vendor performance.
 - Consolidated and analyzed monthly, quarterly, and yearly data to provide the client with insight into all of their external labor activity.
 - Developed SQL scripts for ad hoc financial reporting.
-

Interactive Communications (Incomm)

Apr 2015 - Mar 2016

Network Optimization Analyst

- Developed a supervised machine learning model to estimate approximate changes in volume and margins.
 - Reduced manual data input time by developing a pricing function to create customer rate sheets as well as predict expected traffic changes based on customer targets.
 - Analyzed trends in domestic and international call volume data to identify and mitigate fraud.
-

Other Experience

Develop-This

Sep 2022 - Present

Co-Founder and CTO

- Created business strategy documentation including pricing and revenue models and forecasts.
- Developed information storage, storage, presentation, and architecture strategies ensuring compliance with regulatory policies such as GDPR and CCPA.

- Oversaw the Engineering department management teams coordinating all projects both internal and external to ensure on time delivery.
- Lead development of backend APIs and database connections.
- Planned and provided community training events for aspiring developers to hone their skills.
- Ensured technology landscape and expenses remained appropriately balanced with company growth.

Trilogy Education Services
Data Visualization Bootcamp Instructor - Vanderbilt University

May 2019 - Aug 2022

- Taught students in data cleaning, preparation, transformation, and visualization techniques using Python and Javascript.
- Introduced students to Machine Learning and Big Data concepts with Tensorflow, Keras, Google Collab, and PySpark.
- Taught students SQL using Postgres, web scraping with Python, and introduced students to MongoDB.
- Taught students backend web development using Flask.

United States Marine Corps Reserve
Sergeant

Nov 2006 - Nov 2012

- **Squad Leader** — Responsible for conducting annual performance reviews and ensuring my subordinates were up to date on required trainings; as well as cultivating high morale.
- **Supply Chain** — Responsible for maintaining and accounting for approximately \$1.5 million in government equipment.

<i>Education</i>	Kennesaw State University - Kennesaw, GA Masters of Science Applied Statistics and Analytics	Graduated May 2023
	Kennesaw State University - Kennesaw, GA Bachelor of Science Mathematics	Graduated May 2014
